

## Practical 8[C]

AIM: Implement a Circular Queue and perform the Queue operations: Enqueue, Dequeue and Print using Menu Driver Program such as 1.Add, 2.Delete and 3.Print and 4.Exit.

Program:-

```
#include <stdio.h>
```

```
// Creating array Globaly
```

```
int Queue[5];
```

```
int front = -1, rear = -1, data;
```

```
// FUNCTION FOR ENQUEUE
```

```
int enqueue()
```

```
{
```

```
    if((rear + 1) % 5 == front){
```

```
        printf("The Queue is Overflow.\n");
```

```
    }else if(front == -1 && rear == -1){
```

```
        front = 0;
```

```
        rear = 0;
```

```
        printf("Enter the data.\n");
```

```
        scanf("%d", &data);
```

```
        Queue[rear] = data;
```

```
    }else{
```

```
        printf("Enter the data.\n");
```

```
        scanf("%d", &data);
```

```
        rear = (rear + 1) % 5;
```

```
        Queue[rear] = data;
```

```
    }
```

```
    return 0;
```

```
}
```

```
// FUNCTION FOR DEQUEUE
```

```
int dequeue()
```

```
{
```

```

if(front == -1 && rear == -1 ){
    printf("The Queue is Underflow.\n");
}else if(front == rear){
    printf("The Queue is Underflow.\n");
    front = rear = -1;
}else{
    printf("The deleting element is %d.\n", Queue[front]);
    front = (front + 1) % 5;
}
return 0;
}

void display()
{
    if (front == -1)
    {
        // Checking the queue is empty or not.
        printf("The Queue is empty so, can not print the element.\n");
    }
    else
    {
        // printing the elements in the Queue
        int i = front;
        while (1)
        {
            printf("%d\t", Queue[i]);
            if (i == rear)
                break;    // Stop when we reach the rear
            i = (i + 1) % 5; // Move to the next index in circular manner

        }
        printf("\n");
    }
}

```

```
// MAIN FUNCTION

int main()
{
    int choice;

    printf("Queue Implementation\n");

    printf("Choices\n1.Enqueue\t2.Dequeue\t3.Print\t4.Exit\n");

    do
    {
        printf("Enter a valid choice\n");

        scanf("%d", &choice);

        switch (choice)
        {
            case 1:
                enqueue();

                break;

            case 2:
                dequeue();

                break;

            case 3:
                display();

                break;

            case 4:
                printf("You exited the Program successfully.");

                break;

            default:
                printf("Please enter a valid choice as mention!\n");

                break;
        }
    } while (choice != 4);

    return 0;
```

}

Output:-

```
PS C:\Users\athaw\OneDrive\Desktop\c program> gcc w.c
PS C:\Users\athaw\OneDrive\Desktop\c program> .\a.exe
Queue Implementation
Choices
1.Enqueue 2.Dequeue 3.Print 4.Exit
Enter a valid choice
1
Enter the data.
48
Enter a valid choice
1
Enter the data.
56
Enter a valid choice
1
Enter the data.
23
Enter a valid choice
3
48 56 23
Enter a valid choice
4
You exited the Program successfully.
PS C:\Users\athaw\OneDrive\Desktop\c program>
```
